

# Microsoft Dynamics 365 Business Central

## Solution that will grow with you!

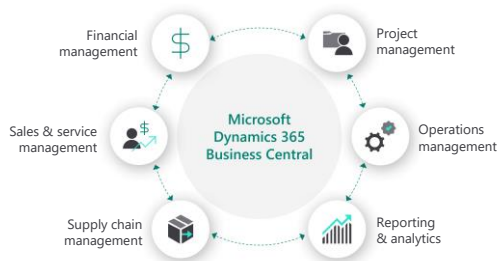

Are you a company with a long tradition or a just - starting start-up that needs a reliable information system to cover all business and financial processes of the company?

Microsoft Dynamics 365 Business Central cloud solution covers the pillars of the digital transformation, both operational efficiency and increased employee productivity. If you are interested in the management and overview of purchasing, sales, logistics, warehousing and services, or production, Microsoft Dynamics 365 Business Central is the right choice for you. [Navertica 365 BC Packages](#) are ready for you to deploy quickly.

### What is Business Central?

The modern ERP (Enterprise Resource Planning) system is a complete solution for business process management which is used worldwide. The system is operated in the cloud with high availability and provides continuous updates and upgrades (at least twice a year), including relevant legislation. It includes all the necessary functionalities for the areas of accounting, finance, warehousing, purchasing and payables, sales and receivables, production, projects and service. The solution is integrated with Microsoft 365 and, thanks to built-in intelligence, is easy to use and helps to improve business decisions.

### Connect your business!

### Connect your business

### Make smarter decision

### Start and grow easily

The ideal Microsoft Dynamics 365 Business Central system connecting management and reporting, purchasing and logistics, with a plan to expand the system with service activities and support for the management of business and sales activities.

### Get started quickly and easily!

- No need to have hardware - the solution is built on a cloud platform.
- Quick and easy system implementation.
- Possibility of access from any device - from a tablet or mobile phone in the form of an application.
- On the client side, only a compatible browser will suffice.
- Friendly user interface.
- Possibility of integration with other Microsoft 365 applications - Outlook, Excel, Word.
- Monthly payments for administration and licenses.
- Easy extensibility with ready-made solutions from App Source

### One complete solution that meets the needs of growing companies

Automatic unification of systems and processes enables the management of finances, sales, services and operations.

It enables integration with third-party applications such as payroll, banking, CRM or industry-specific systems.

Business Central is part of the solutions supplied by Microsoft and can be integrated with Microsoft Office programs, or Microsoft Office 365 (Excel, Word, Outlook, Power BI, etc.).

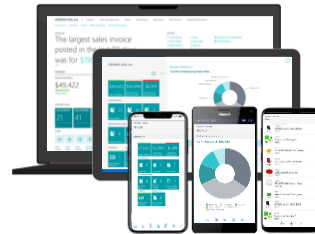

Business Central can be data-linked with other systems if they have the appropriate interfaces (e.g. WebServices, API, ODATA). If interfaces are not available, it is necessary to use either universal integration tools from Microsoft or from other manufacturers, or develop specific links (Custom editions only).

## Who are the customers for Business Central, who is it for?

The solution is suitable for small and medium-sized companies - from one user to many hundreds of users. It can be used both, in commercial organizations and in the non-commercial sphere. The functionality of the system is adapted to the legislation and language of the country in which the system is on the market. Due to the possibility of users working in multiple languages at the same time, it is also suitable for international organizations.

## Choose the right package from Navertica 365 BC Packages for the right step forward towards innovation!

### 1. Fiscal Edition

Are you a smaller organization that is interested in covering basic financial processes, i.e. using the functionality of accounting and finance, including sales and purchase invoices?

The Fiscal edition ensures that these functional areas will be pre-set and parameterized by the provider so that users can easily use them and not have to waste time on lengthy analysis and adaptations for each individual customer process.

### 3. Trade Plus Edition

The plus in the title of this edition means that the areas and functionality of the Trade edition are accessible to users with the functionality of advanced warehousing operations (e.g. bins, warehousing, retrieval, re-storage) with support for barcodes and possibly handling units and mobile terminals (expansion modules). The system is also ready for the use of serial numbers, batches or expirations. The Trade Plus edition also includes modules for resources, projects, assemblies, and assembly BOMs.

### 2. Trade Edition

Are you a small or medium-sized organization that needs to take advantage of warehouse functionality with buying, selling and warehousing, linked to accounting and finance?

The Trade edition includes presetting and parameterization of all necessary functionalities. A module for retail outlets (POS) may also be a suitable extension of this edition.

### 4. Custom Edition

If you know that the above mentioned pre-set editions of Fin, Trade or Trade + would not meet your expectations and you also need to cover production and / or service processes, or you need specific functionality, which is often their main competitive advantage and which is of course not part of the preset version of the system in editions listed above - we have the Custom edition for you. This edition is also of interest to customers, who often need the solution provider to analyze specific issues with them before starting the implementation, and possibly also to prepare specific functionalities according to the identified requirements as part of the subsequent customization of the solution.

## As part of the cloud strategy and connectivity of individual Microsoft products, you will get useful resources and tools for a successful start!

I am INTERESTED - how should I proceed?
